

Make a Giant Leap in the Value of Item Data

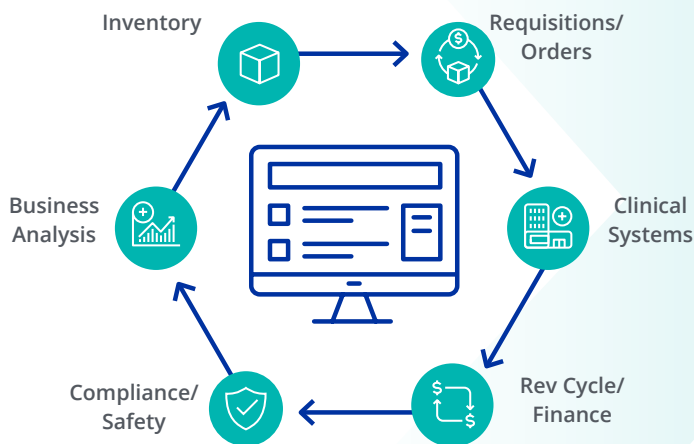

GHX Data Connect for cloud delivers the foundation you need to help maximize your ERP investments

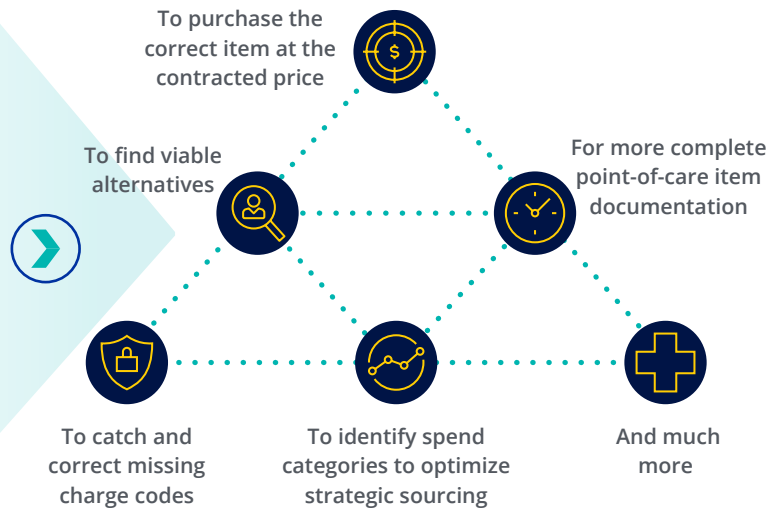

The days of minimal data alignment and on-premise solutions are changing. Healthcare today requires scalable systems that support complex data and integrated business processes.

Item data has a heavy load to bear

Massive bodies of data feed systems

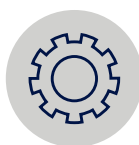

Staff depend on data:

Let GHX Data Connect do the heavy lifting. The industry's largest and most up-to-date supply item data catalog, GHX Data Connect for cloud delivers:

Millions of expertly enriched data points

Validated attributes such as GTIN, UNSPSC, HCPCS, revenue and billing codes, and descriptions

API Integrations with Workday, Oracle and Infor

A few of the highlights:

More modern and manageable model for supply chain data management

GHX brings decades of experience innovating with healthcare providers and ERP partners to present an advanced data management model capable of sustaining item and price integrity from within your cloud ERP with API-based integration capabilities.

Item data with breadth, depth and completeness no one else provides

GHX validates your item data and corrects inaccuracies against the GHX Catalog – the industry’s largest catalog of verified content.

GHX Data Connect for cloud delivers curated revenue and billing codes, product classifications and clinical attributes to your ERP. Clinical documentation can be more complete and multiple downstream benefits improved such as charge capture and revenue integrity.

GHX is a proven supply chain data partner for go-live AND go-forward

Advanced technologies, intelligent integration and outstanding people help make the path to higher-level supply chain initiatives more attainable.

Comprehensive professional support services

We support you with professional services before, during and after your cloud ERP go-live. Your data is curated to your organization’s business needs and your data strategy is validated by GHX subject matter experts.

- Establish a data governance cadence
