HealthNEXUS

CREATE A SINGLE SOURCE OF TRUTH FOR YOUR CUSTOMERS

Maintaining an up-to-date catalogue of medical product and pricing data, that supports regulatory requirements and global data standards, can be a huge challenge for healthcare suppliers and manufacturers.
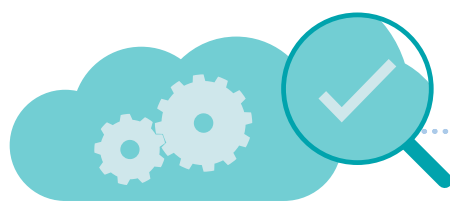

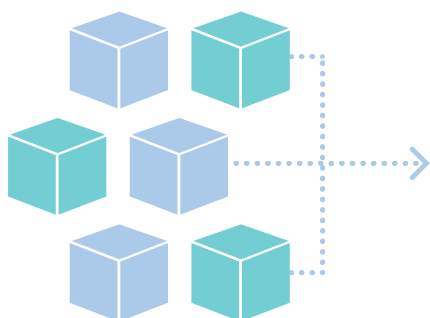

Intelligent catalogue management can help you solve this challenge and give your customers access to clean and up-to-date product information.

Helping you to enrich your data

With HealthNEXUS, you can import, update and publish all of your product information in one place, reducing the effort involved in managing your data.

Data is compared against current regulatory and global standards, including regional and country specific coding and classification practices such as GS1 GTINs, NHS-eClass and ECLASS, helping you to enrich your data and to stay compliant.

Updates can be published to all the healthcare providers within the GHX community, as well as to our own GDSN-certified data pool, Health ConneXion, creating a single source of truth for your customers.

HealthNEXUS

Uniting the best of healthcare™

Improve your customer experience with optimised data

Clean and accessible data improves your customer experience by providing quality product and aligned pricing information that they can use at the point of purchase, increasing your touchless order rates and reducing invoice pricing disputes.

And if you're using GHX Exchange Services as your automated order processing platform, HealthNEXUS will automatically validate order lines against your catalogue data, and correct errors or provide missing data where possible, saving you further time and resource.

KEY FEATURES AND BENEFITS

Efficient catalogue management

Import, update, manage, and publish your catalogue data in one central location.

Intuitive user interface

Upload your catalogue through our intuitive user interface or directly from your own system.

Easy accessibility

Your catalogue is stored in the cloud, making it easily accessible for you and your customers.

Global standards compliance

Prepare your data to comply with product and pricing attributes mandated by the marketplace.

Cost savings

Reduce costs associated with incorrect orders, returned goods, credits and rebills.

Clean and classified data

Enrich your data with GTINs and publish your GS1-compliant data to our GDSN-certified data pool.

Time savings

Minimise the time you and your team spend on managing catalogue data and providing it to your customers.

System compatibility

Connect to your product information system, to automatically notify customers when catalogues are updated.

Improved customer satisfaction

Improve customer experience and satisfaction by providing clean, classified, and meaningful catalogue data.
