

IDENTIFY PHYSICIAN-LEVEL DEVICE VARIATION TO BALANCE COST AND QUALITY

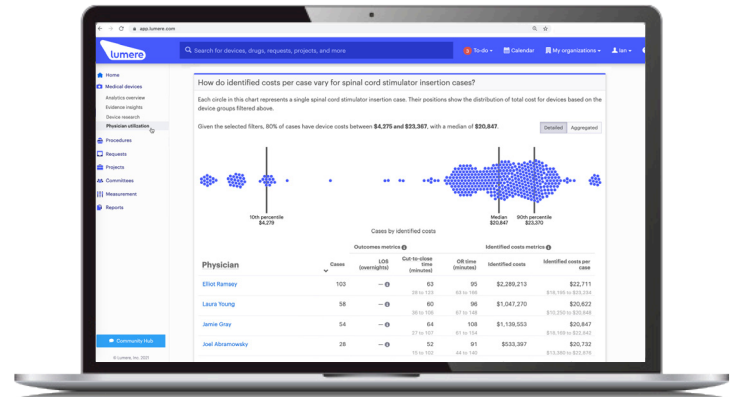

Strong physician engagement is a fundamental building block for the clinically integrated supply chain. GHX Lumere's Physician-Level Analytics provides transparency into physicians' device utilization to enable evidence-based and clinically relevant decision making for sourcing and value analysis.

Identify the right physicians to engage in spend initiatives

- **Understand cost drivers and variation** in device use by physician down to the case level
- **Align your outcomes data with evidence** and determine how device use affects outcomes
- **Collaborate with physicians** to manage device selection and analyze the financial impact of changing their utilization patterns

Reduce unnecessary variation at the procedure level

- **Analyze data** for 200+ procedures across multiple service lines
- **Evaluate differences** in physicians' outcomes and device cost per case for a given procedure
- **Explore utilization** of medical devices both individually and as compared to functionally similar products
- **Segment analyses** by facility, procedure, vendor, and device

Physician-Level Analytics helps create more lasting strategic partnerships between supply chain and clinicians. It provides the data needed to support conversations around device selection and utilization.
