

Reimagine formulary review and implementation

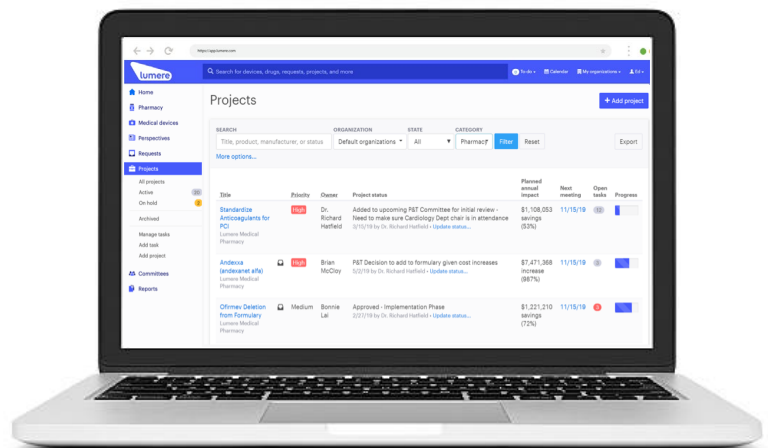

Clinical pharmacists face complex strategic, clinical and operational demands, but many are burdened with labor-intensive P&T processes. Lumere reduces the manual effort needed for P&T initiatives, empowering pharmacists to spend time optimizing drug use, collaborating with multidisciplinary providers and directly caring for patients.

Uncover therapeutic alternatives by comparing drugs within indications and across classes

- **Determine therapeutic equivalency** and evaluate formulary additions with access to an extensive research library.
- **Address drug shortages** by comparing drugs across therapeutic classes that share an indication.
- **Proactively evaluate new drugs** and biosimilars coming to market.

Streamline P&T processes and document formulary decisions

- **Reduce time to results** with a single platform to manage formulary requests, stakeholder sign-offs, meeting agendas, minutes and approvals, customized to your workflow.
- **Access comprehensive, non-biased evidence reviews** that address efficacy, safety and cost, along with the corresponding research articles, indexed by level of evidence.
- **Ensure regulatory compliance** by storing, accessing and sharing your organization's P&T documents within a web-based repository.

"Lumere frees our pharmacists from data mining and enables them to work top of license and redirect that energy on patient care."

System Vice President, Clinical Pharmacy Services, at a Health System in the Northeast
